

Your next radio,
won't be a radio.

Whisper X

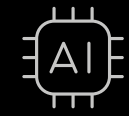

Radio guide system since 1999

OUR NEW RADIO GUIDE

The Whisper-X system is designed to offer the perfect combination of technological innovation and ease of use. With autonomous channel management and advanced beamforming technology, users can enjoy an unparalleled audio experience, without ever having to worry about interference or complicated setups. Integration with the smartphone app simplifies system management, while auto-on functionality and extended battery

life make Whisper-X the ideal partner for intensive tours and extended sessions. All this is packaged in an ergonomic, lightweight and customizable design, designed to ensure maximum comfort and satisfaction of the user.

This product not only offers a high-quality solution for radio guide needs, but raises the industry standard with technological innovations that simplify use and improve the user experience.

AI-Driven Patented technology for zero interference.

Thanks to our exclusive patented technology, the transmitter constantly monitors the signal quality, performing an automatic and immediate channel change in case of disturbances. No manual selection is necessary, ensuring smooth and uninterrupted communication.

Worldwide Frequency.

Our radio system operates on the 2.4 GHz band, the only globally compatible frequency, allowing our radio guides to function without interruption anywhere in the world. A range of over 100 metres ensures optimal coverage even in large spaces.

Instant pairing feature.

With 15cm Near Field pairing technology, devices connect quickly and easily: simply bring the receiver close to a transmitter in pairing mode to start pairing.

Integrated voice-tracking microphone.

Our wireless microphone transmitter is designed for convenient and comfortable use: it isolates the speaker's voice, reduces background noise and ensures clear and clutter-free communication.

Whisper

((◦)) Smart LED interface.

RGB LEDs that signal the status of the device clearly and immediately, ensuring simple and effective visual control.

Infinite battery life.

100% eco-friendly.

Rechargeable and easily interchangeable batteries: a solution that allows you to continue your tours without interruptions. And by choosing to eliminate disposable batteries, we support a more sustainable and continuous experience.

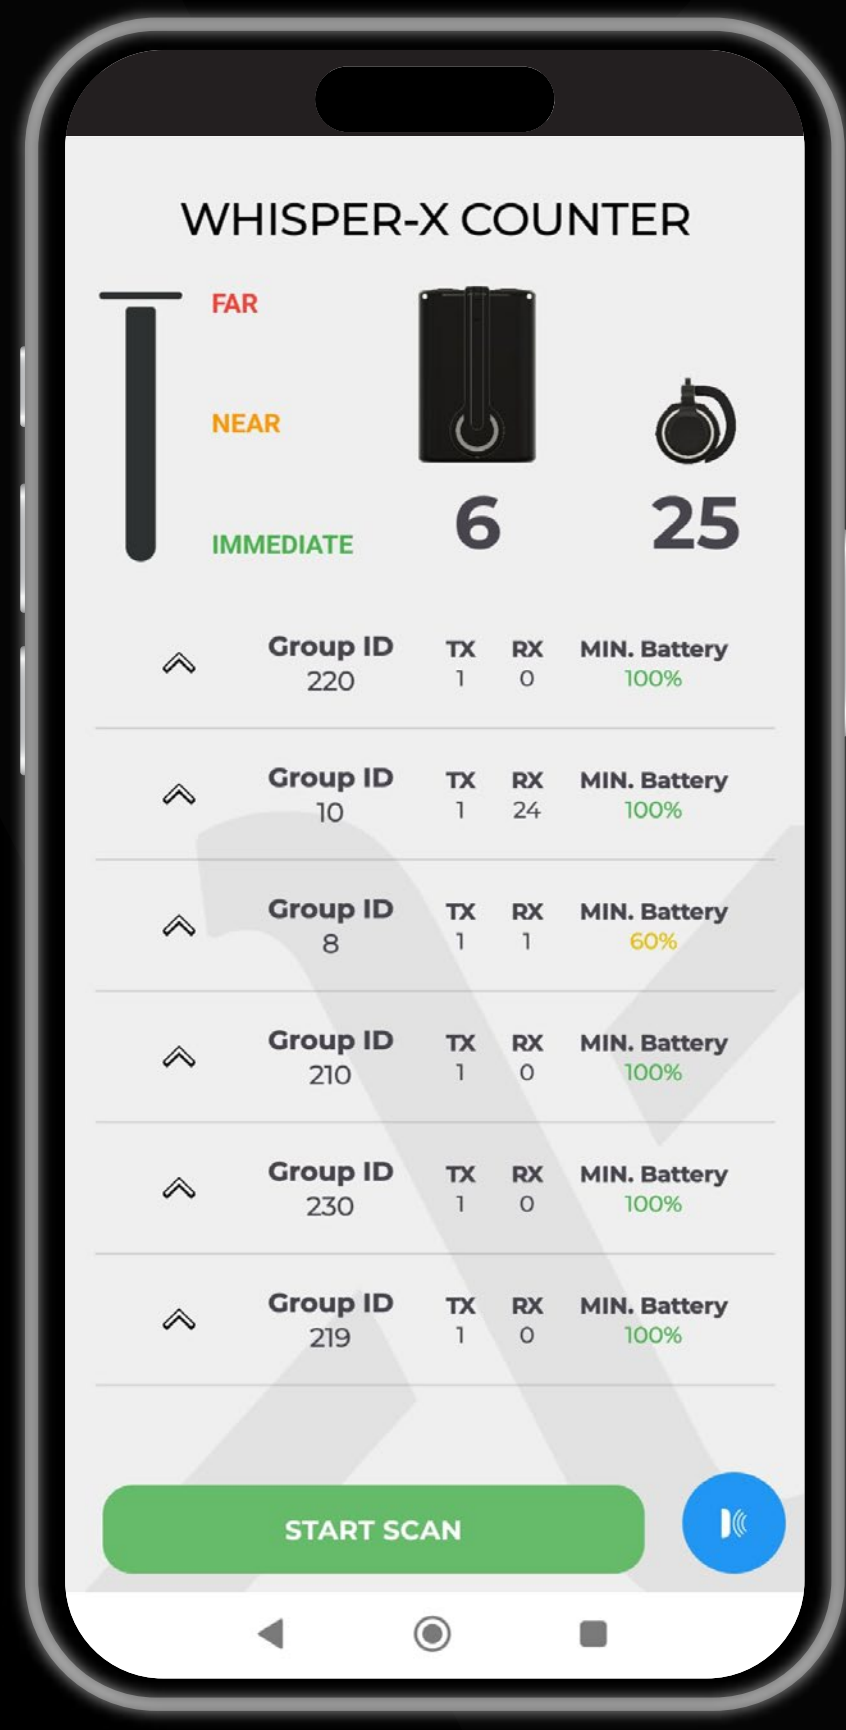

Fit for everybody.

An ergonomic, lightweight and compact design. Hook made of hypoallergenic material that ensures a secure and comfortable fit on both ears.

App Whisper X Counter

- The app allows you to:
- Detect and count nearby devices.
 - Filter devices by distance, from closest to farthest.
 - View, for each detected device:
 - the group it belongs to;
 - the battery status.

OVER-THE-AIR UPDATES

The Whisper-X system is designed to constantly evolve thanks to Over The Air (OTA) updates. This feature allows you to update the devices with the service APP reserved for operators in the sector. With OTA updates, it is possible to implement new features in development, offering a platform that is always cutting edge and constantly evolving.

- **Pay per Use:** The Pay per Use feature offers unprecedented flexibility, allowing you to pay only for the features you use. This system allows you to optimize operating costs, adapting the service to the real needs of users and companies, without unnecessary fixed costs.
- **Anti-shoplifting system:** With the innovative Anti-shoplifting system, Whisper-X guarantees total protection against theft or loss of devices, offering additional security.
- **Audio Presets:** Thanks to the predefined Audio Presets, you can customize the sound experience for different types of tours or events, optimizing the audio output based on the environment or the specific needs of the public.
- **Indoor Tracking:** The Indoor Tracking feature allows you to monitor the position of devices in real time inside closed environments, such as museums, conference centers or large events. This technology allows you to improve the user experience, offering a precise and reliable indoor navigation and localization system.
